Weather & Wellness — Assessment Evidence & Rubric Report

Student Name: Mohammed Khan | **App Package:** au.edu.jcu.assessment.utilityapp

1. General Code Quality & GitHub Evidence

• **Code Quality:** 0 warnings / 0 errors across build, lint, and unit tests. Clean package structure (ui and data).

• **GitHub & Commits:** Version controlled with meaningful commit messages documenting feature development, API integration, icon design, and bug fixes.

2. App Purpose & Functionality

• **Purpose:** Combines real-time weather forecasting with daily mental wellness and mindfulness quotes.

• **Features:** Live weather data (Open-Meteo API), city selector (Townsville, Cairns, Brisbane, Sydney, Melbourne), °C/°F temperature unit toggle, and daily motivational quotes.

3. API Usage & Architecture

• **Retrofit:** Asynchronous REST API calls via Retrofit 2 + Gson converter and Kotlin Coroutines (suspend).

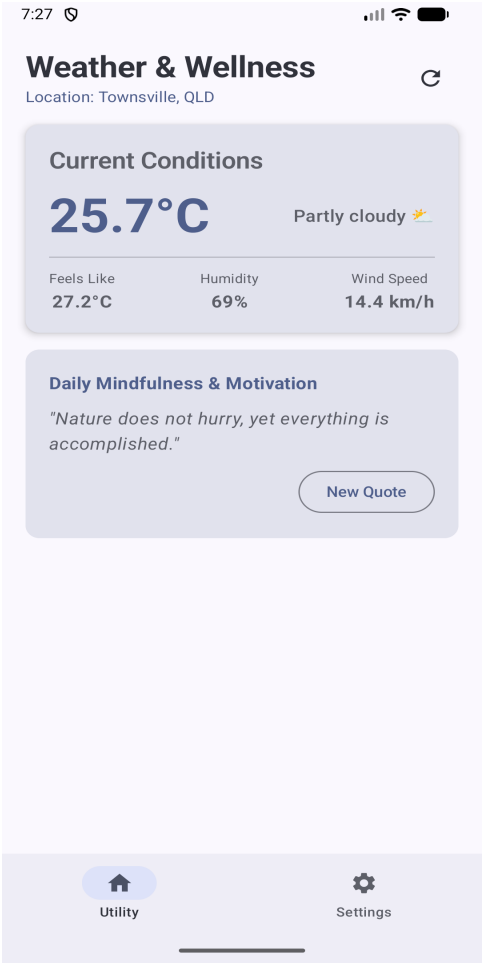

• **ViewModel:** Reactive state management using Jetpack ViewModel and Compose mutableStateOf.

4. Jetpack Compose UI & App Icon Evidence

• **App Logo:** Custom adaptive launcher icon (sun and clouds vector with sky-blue gradient background).

• **Material 3:** Built using Material 3 design tokens, cards, navigation bar, and clean typography.

5. Student Reflection

Building **Weather & Wellness** was an invaluable learning experience. I mastered Jetpack Compose Material 3 UI design, Retrofit API integration, and Kotlin Coroutines. Overcoming challenges like adding the INTERNET permission and fixing Kotlin property signature clashes gave me deep confidence in building production-ready Android apps.
